

A new chapter in our story:

Welcome to Pearmine Health and Medadvance

For more than nineteen years, we have built this healthcare company one step at a time, guided by a clear ambition: to serve patients, caregivers and the wider healthcare community, with an unwavering commitment to preventing infection risk.

That ambition has always rested on a single, simple conviction: **it is people, above all, who make the difference.**

Today, we at Didactic are delighted to mark another milestone in that story with the acquisition of Pearmine Health and Medadvance.

Pearmine Health develops and manufactures wipes and impregnated gloves, alongside a dedicated range of oral-care products. Its expertise is best illustrated by Dymacare, a range designed for intensive care, which enriches and strengthens the solutions already offered by Inter-med and broadens the Group's portfolio still further.

Medadvance represents and distributes these products across Europe, working closely with the healthcare institutions it serves.

This union is a natural fit, bringing real complementary strength to both Didactic and Pearmine Health.

For Didactic, it deepens our presence in Germany, opens the door to new opportunities in the US market, and brings valuable expertise into the fold.

Pearmine Health, in turn, will draw on Didactic's expanded international reach and on the strength of a Group already present in more than 60 countries. Together, these latest acquisitions unlock new avenues for growth

and allow us to offer dependent patients an even wider range of products, all in service of the same goal: reducing infection risk.

For our customers and partners, nothing changes in what matters most: the same people to call on, a broader range of products, and the same commitment we bring every day.

This acquisition also strengthens the Group's industrial capacity and carries forward the growth of our industrial footprint.

With Laurent Helewa (founder of Dr Helewa), Eric Tanguay (founder of Hygie in Canada) and Erik Joosten (founder of Arion in the Netherlands and Germany), all of whom stand alongside us day after day, we continue on our path. And we are delighted that Jacques Gutedel, founder of Medadvance and Pearmine Health, and Matthew Ley, co-founder of Pearmine Health, have chosen to join us in this collective adventure.

This is the same momentum that has carried the Didactic Group forward, step by step: in France, with Polysem, Intermed and Infineed; internationally, with Hygie and Dr Helewa; and in the Netherlands, with Arion and Dispocare.

Today, that journey continues with Pearmine Health, based in the United Kingdom, and Medadvance, based in Germany.

The Group now numbers 245 employees, with products distributed around the world.

OUR AMBITION HAS NOT CHANGED

We are building a leading international player in infection risk prevention - one capable of uniting industrial excellence, closeness to the field, and a genuine commitment to people.

We move forward with humility, but with unwavering resolve.

Together, we will keep building a healthcare group defined by its commitment: to make care safer, and to stand alongside healthcare professionals in their everyday work.

This chapter has also been made possible by the trust of our partners: UI Investissement, Généo Capital Entrepreneur, Bpifrance and MACSF.

Welcome to the teams of Pearmine Health and Medadvance.

We are proud to carry this human adventure forward, together.
